

Back That Up!

iWeb Domain File

iWeb saves all of your website information into one file, which makes for easy back up. This file is backed up to our servers, but we strongly suggest you keep a copy for yourself. To make a backup, do the following:

Open a new Finder window and click on your home folder (with your username on it). Then go to Library / Application Support / iWeb.

Drag the “Domain” file to the flash drive that you want to save to, which will create a copy of the file. You can also drag the file to a blank CD/DVD and burn. That’s it!

Please see your building tech if you have any questions.
